Abstract

The aim of this article is explain the relationship between living-living, living-nonliving, nonliving-nonliving body by radiation associated their body. If two body come together and the radiation emitted or absorbed by them are in same phase then they are good friend or have same chemical or physical properties.

Key Words- De-Broglie Relation, Einstein mass energy relation, Bhagwat Gita.

Introduction

In 1924, Lewis de-Broglie proposed that matter has dual characteristic just like radiation. His concept about the dual nature of matter was based on the following observations:-

(a) The whole universe is composed of matter and electromagnetic radiations. Since both are forms of energy so can be transformed into each other.

(b) The matter loves symmetry. As the radiation has dual nature, matter should also possess dual character.

According to the de Broglie concept of matter waves, the matter has dual nature. It means when the matter is moving it shows the wave properties (like interference, diffraction etc.) are associated with it and when it is in the state of rest then it shows particle properties. Thus the matter has dual nature. The waves associated with moving particles are matter waves or de-Broglie waves.[1]

In physics, the law of conservation of energy states that the total energy of an isolated system remains constant — it is said to be conserved over time. In other words, this law means that energy can neither be created nor destroyed; rather, it can only be transformed from one form to another.[2-3]

Lord Krishna tells Arjuna as per Bhagwat Gita that Individual Soul is Immortal. It tells all of us with conviction that we are an Immortal Soul & not a mortal body. We shall survive after death also & we as a Soul shall live forever, births after births.[4]

Einstein used $E = mc^2$ to prove that mass and energy are relative to each other. [5-6]

Marriage is largely based on kundali Milan. Kundali and Gunas are just a part of the mathematics which is given a name "Astrology".[7]

Conclusion

According to de broglie every moving living and non living body associated with its own radiation with different lambda. In living body Blood(water, haemoglobin, Fe etc.) is moving anytime. In plant water is move anytime in plant body. Non living bodies have motion of electron . It means some radiation is present with this. As per Bhagwat Gita that Individual Soul is Immortal it some type of energy or radiation. This also proves by energy conservation law.

If two living body come together and the radiation emitted or absorbed by them are in same phase then

they are good friend and respect each idea and thought. It means they are good husband and wife (Kundali Milan). If living two body come together and the radiation emitted or absorbed by them are in opposite phase then they are good enemy and do not respect each idea and thought.

If non living two body come together and the radiation emitted or absorbed by them are in same phase then their physical and chemical properties are same. If non living two body come together and the radiation emitted or absorbed by them are in opposite phase then their physical and chemical

properties are different. Two stone or river are talking to each other.

Interaction also present in living and non living body. For example if radiation associated with my vehicle and my body have same phase than this is shubha(lucky) for me and if these radiations are in opposite phase than it is ashubha(unlucky) for me.

The intensity of these radiation depends on our thought that means if our thought are positive than our body emits positive energy or radiation. If our thoughts are negative than our body emits negative energy or radiation.
